SUMMARY

Passionate engineering student inclined towards coding and software development, with hands-on experience in building web applications and solving real-world problems.

EDUCATION

Bachelor of Technology in Computer Engineering (Data Science) Shri Ramdeobaba College of Engineering and Management, Nagpur CGPA : 8.97	2023 – 2027
Higher Secondary (12th) – 74.8% Suyash Convent & Junior College, Nagpur	2023
Secondary (10th) – 97.4% Suyash Convent & Junior College, Nagpur	2021

SKILLS

Languages: Java | JavaScript | SQL
Frontend: React.js | Redux | HTML | CSS | Tailwind CSS
Backend: Node.js | Express.js | REST APIs | JWT Authentication | RBAC
Database & ORM: MongoDB | PostgreSQL | Prisma
Core Concepts: OOPs | Data Structures & Algorithms | CRUD Operations
Tools & Platforms: Git | GitHub

PROJECTS

TechJourney: The essence of art

- Crafted a personalised portfolio demonstrating expertise in web development, showcasing my projects and technical skills.
- Developed an interactive portfolio that improved user engagement by 40% through clear project presentation.

Quick Auto Assist – Multi-Role Breakdown & Parts Platform

- Engineered a real-time roadside assistance platform using **Node.js**, **Socket.IO**, **Redis**, and live GPS tracking to connect stranded drivers with nearby technicians.
- Developed secure multi-role dashboards for users, technicians, vendors, and admins using **React.js**, **Redux**, **Tailwind CSS**, **JWT Authentication**, and **RBAC**.
- Integrated QR-based payments, **Cloudinary**, and **PostgreSQL/Prisma** for secure service and transaction management.

Dynamic Form Engine

- Engineered a JSON-driven **Server-Driven UI (SDUI)** system for dynamically rendering and validating complex **multi-step forms**.
- Implemented **schema-based field rendering**, **conditional logic**, **OTP verification** and **pincode-based auto-fill** workflows.
- Centralized dynamic form state management using **Redux** and reusable component-based architecture with **API-driven rendering logic**.

JSArena – Server-Driven Interactive Coding Environment

- Engineered a **configuration-driven (SDUI)** browser-based IDE using **React**, **Tailwind CSS**, and **Monaco Editor** to provide a seamless coding experience with **dynamic layouts** and **file trees**.
- Implemented an **in-browser JavaScript execution engine** to dynamically run, evaluate, and test Data Structures & Algorithms (DSA) problems against predefined **test cases** in real-time.
- Integrated **IndexedDB** for persistent local state management, ensuring uninterrupted workflows by saving file contents, user configurations, and execution history across sessions.

ACHIEVEMENTS

Runner-Up – INDIA-ISRAEL Hackathon & Symposium 2026 • Developed Jal Rakshak , an AI-powered IoT system for water contamination detection and outbreak risk monitoring.	JANUARY 29, 2026
1st Place – INNOVENTURE 2025 • Built HelpOnRoute , a real-time assistance platform for delivery partners with emergency support and GPS-based connectivity.	AUGUST 26, 2025
1st Place – ENNOVATE 25 (Software Category) • Developed a data-driven system for water leakage detection, quality analysis, and pilferage identification.	MARCH 29, 2025
